

# VLADIMIR KOSTIKOV

Full Stack Developer

Moscow · [vladimirkostikov.com](https://vladimirkostikov.com) · [github.com/VladimirKostikov](https://github.com/VladimirKostikov)

## EDUCATION

Moscow · Bachelor's degree, Business Informatics

2022 — 2026

## WHAT I DO

- I take a product from an empty brief to something people use every day: a public site, an internal app, or an admin.
- When it is already live I stay with it. I handle failures, add what the work is missing, and keep the product running.
- Inside the same product I build applied software on live data: a dashboard for volume, statuses, and where work is stuck. Records are grouped by stage, source and person, so the queue, closed work and the bottleneck are clear at once.

## WORK EXPERIENCE

Exalify · Full Stack Developer

2025 — 2026

- Led development of the web product from scratch: IELTS and Goethe course, student accounts, teacher admin.
- After launch I answered what broke for students and added the pieces the course still lacked.
- Who is on which lesson, who finishes, where people drop; split by stage and teacher; grouping of the wait for a lesson and where the programme stalls.

Vera v Delo · Full Stack Developer

2023 — Present

- Led development of the foundation's web product from scratch: the application, records, statuses.
- Still on the account. Support, changes to the process, new functions when the work shifts.
- On live records: volume, statuses, and where work is stuck; split by stage, source, person; grouping of the queue, the done work, and the bottleneck.

Nash Angel Khranitel · Full Stack Developer

2024 — Present

- Led development of the organisation's web product from scratch: their own application, record keeping, screens for the team.
- I keep the system: incidents, extra fields and flows when the process changes.
- Analysis inside the same application: volume, statuses, where work sits; grouping by stage and person, filters the team opens every day.

v-bet.su · Full Stack Developer

2024 — 2026

- Led development of the CRM from scratch: records, operator side, the flows the team works in.
- After go-live I kept the CRM: incidents, extra fields and flows.
- On live CRM records: volume, statuses, where a case sits; split by pipeline stage and operator; grouping of the queue and the bottleneck in the CRM.

zaim-v-zaim · Full Stack Developer

2024 — 2026

- Led development of the web product from scratch: the lending application, operator cabinet, application funnel.
- Ran it after go-live: support, extra steps in the funnel, changes to match the rules.
- On live applications: volume, statuses, where a case sits; split by funnel stage and operator; grouping of the queue, closed cases, and where the funnel stalls.

Freelance · Full Stack Developer

2021 — Present

- For clients I lead development of the web product from scratch, from the live task.
- I stay after handover when they need it: support and extra features.
- When the task needs it, inside the same product: the client's live data; split by stage, source, person; grouping of the queue, the done work, and where work piles up.

## SELECTED PROJECTS

Exalify · Full development

2025 — 2026

- The whole exam-prep product from an empty brief: lessons, student accounts, teacher admin. [exalify.com](https://exalify.com)

LaraBoom · Host and API for this site

2026

- The stack under [vladimirkostikov.com](https://vladimirkostikov.com), written so someone else can take over. [vladimirkostikov.gitbook.io/laraboom](https://vladimirkostikov.gitbook.io/laraboom) · [github.com/VladimirKostikov/LaraBoom](https://github.com/VladimirKostikov/LaraBoom)

Deployard · Release console

2026

- A product for running releases, so operators do not work on the servers by hand. [github.com/VladimirKostikov/Deployard](https://github.com/VladimirKostikov/Deployard)
